# Beautiful Software

Michele Lanza

```
void md5::Update(uchar* chInput, uint4 nInputLen)
{
    uint4 i, index, partLen;
    // Compute number of bytes mod 64
    index = (unsigned int)((m_Count[0] >> 3) & 0x3F);
    // Update number of bits
    if ((m_Count[0] += (nInputLen << 3)) < (nInputLen << 3))
        m_Count[1]++;
    m_Count[1] += (nInputLen >> 29);
    partLen = 64 - index;
    // Transform as many times as possible.
    if (nInputLen >= partLen)
    {
        memcpy( &m_Buffer[index], chInput, partLen );
        Transform(m_Buffer);
        for (i = partLen; i + 63 < nInputLen; i += 64)
            Transform(&chInput[i]);
        index = 0;
    }
    else
        i = 0;
    // Buffer remaining input
    memcpy( &m_Buffer[index], &chInput[i], nInputLen-i );
}
// md5::Finalize
// MD5 finalization. Ends an MD5 message-digest operation,
// writing the message digest and zeroizing the context.
void md5::Finalize()
{
    uchar bits[8];
    uint4 index, padLen;
    // Save number of bits
    Encode (bits, m_Count, 8);
    // Pad out to 56 mod 64
    index = (unsigned int)((m_Count[0] >> 3) & 0x3f);
    padLen = (index < 56) ? (56 - index) : (120 - index);
    Update(PADDING, padLen);
    // Append length (before padding)
    Update (bits, 8);
    // Store state in digest
    Encode (m_Digest, m_State, 16);
    memset(m_Count, 0, sizeof(m_Count));
}
```

**Old Habits Die Hard**

**Software... Visualization?**

**preemptive  
disclaimer**

no silver bullet

*visualization is  
only a means,  
not the end*

# We are Visual Beings

70% of all brain inputs come through the eyes

# We see with our brain

- ▶ We have 3 types of memory that process visual information
  - ▶ *Iconic*, the visual sensory register
  - ▶ *Short-term*, the brain's working memory
  - ▶ *Long-term*

# We see with our brain

- ▶ We have 3 types of memory that process visual information
  - ▶ ***Iconic***, the visual sensory register
  - ▶ ***Short-term***, the brain's working memory
  - ▶ ***Long-term***

# Iconic and Short-term Memory

- ▶ Iconic memory is a “buffer” that retains information for less than 1 second before passing it to short-term memory
  - ▶ Perception is *very fast, automatic & subconscious*, therefore called **pre-attentive**
- ▶ Short-term memory processes information in the form of “chunks”
  - ▶ Temporary, a couple of seconds
  - ▶ Limited capacity: 3 - 9 chunks

# Exemplifying Pre-attentive Processing

# Epilogue

---

Huh?

# Reflections

Visualizations are useless  
..as pictures  
..if not accessible

It'll take time for acceptance  
..time is on my side

**The End? - No, just the beginning..**

# Beautiful Software

Michele Lanza

```
void md5::Update(uchar* chInput, uint4 nInputLen)
{
    uint4 i, index, partLen;
    // Compute number of bytes mod 64
    index = (unsigned int)((m_Count[0] >> 3) & 0x3F);
    // Update number of bits
    if ((m_Count[0] += (nInputLen << 3)) < (nInputLen << 3))
        m_Count[1]++;
    m_Count[1] += (nInputLen >> 29);
    partLen = 64 - index;
